Press Release

5-axe petroleum tanker lorry

During the last quarter of 2009 our long-standing customers, *Staub Hirzel* and *Aug. Hunkeler Alikon*, each received a new tanker lorry from us.

Both these lorries are **not only unique in Switzerland but also in Europe** because they are 5-axe solo tanker lorries having a gross vehicle weight of 40 tons. The payload is 25 tons.

Both vehicles are equipped with a rear cabinet which is able to accommodate the complete transfer installation unit consisting of 1 pumping device and 2 full hoses. Therefore the vehicles can be optimally used for distribution of heating oil. In addition to this, the integration of a gravitational unit can also be implemented with which this vehicle can also be used for fuel logistics.

The treble-chamber vehicles are equipped with tanks which meet the latest ADR requirements (ADR is a European agreement concerning the transportation by road of hazardous materials).

Tank capacity is 31500 liters for a heating oil distribution lorry and 33700 liters for the multi-function version. The tow vehicles have a 10x4*6 axle configuration. Therefore together with very good stability there is also safe road handling in all driving situations.

If you want more information about this vehicles than contact Mr. Rolf Bürgin at KASAG:
